

Manav Patel

Ottawa, ON | (343) 987-5270 | manavpatel731@gmail.com | [Linkedin](#) | [Github](#) | [Portfolio](#)

QUALIFICATIONS SUMMARY

- Full-Stack Software Developer with 2+ years of experience building scalable, maintainable, and secure backend services in **Java (Spring Boot), Node.js** and **Python**.
- **AWS Certified Solutions Architect** with working knowledge of **cloud fundamentals, RESTful API integration** and **end-to-end testing with Playwright**, backed by a solid foundation in Git-based collaborative workflows and Agile delivery.
- Curious, growth-minded contributor who uses AI-assisted development tools (Claude Code, GitHub Copilot) to build clean, accessible, scalable solutions across the full development lifecycle.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, Tailwind CSS, React, TypeScript, Astro, SASS

CI/CD and DevOps: GitHub Actions, Jenkins, Git, automated deployment pipelines, monitoring and observability

Backend and Languages: Java (Spring Boot), Node.js, Python, C#/.NET, VB.NET, JavaScript

Testing: Playwright, Unit Testing, TestNG, JUnit, Mockito

Databases & CMS: MySQL, Oracle, PostgreSQL, SQL Server, MongoDB (NoSQL), Prisma ORM, Sanity (Headless CMS)

Cloud & DevOps: AWS (Lambda, EC2, S3, RDS, CloudWatch), Docker, Kubernetes, cloud-native architecture, microservices

Practices: RESTful APIs, ETL and data pipelines, TCP/IP networking, Agile/Scrum, troubleshooting

WORK EXPERIENCE

Full Stack Developer.

TechMero Pvt. Ltd.

Oct 2025 – Present

Gujarat, India (Remote)

Technologies: React, TypeScript, Java, Spring Boot, Node.js, SQL Server, MongoDB, AWS (Lambda, EC2, S3), REST APIs, Git

- Design and implement scalable, maintainable, and secure backend services in **Java (Spring Boot)** and **Node.js** for financial-sector applications, owning features from **API design** through production deployment.
- Develop cloud-native features on **AWS (Lambda, EC2, S3, RDS)**, instrumenting services with **CloudWatch metrics, logs** and **alarms** to provide monitoring and observability for production incident detection.
- **Architect RESTful APIs** and **ETL data pipelines** that extract, transform, and load across **relational** and **NoSQL data stores** (SQL Server, MongoDB, RDS), supporting internal and external system integrations.
- Lead code reviews and partnered with different teams to translate business requirements into production-ready features.

Software Developer Intern (Part-time)

Engineered scalable **Node.js microservices** on **AWS Lambda**, integrating **relational** and **NoSQL (MongoDB) data stores** to support high-performance financial-sector applications.

- Authored **RESTful API documentation** to industry standards, easing integration for consuming teams and reducing onboarding back-and-forth.

Jan 2022 - Dec 2022

Front-End Developer Intern

Interact Health PRO

Feb 2025 - May 2025

Toronto, ON (Remote)

Technologies: React, TypeScript, HTML5, CSS3, REST APIs, Git

- Integrated **RESTful APIs** powering appointment booking, lab-result retrieval, and notification delivery for a healthcare patient-engagement platform, collaborating with backend and QA teams in an **Agile/Scrum environment** across sprint cycles.
- Built production **React** and **TypeScript modules**, including a patient dashboard, scheduling calendar, and secure messaging interface, aligning UI patterns with **WCAG** accessibility standards across all user flows.
- Troubleshot full-stack defects spanning client-server communication, tracing issues across API contracts, error handling, and application state to resolution.

Software Developer Trainee

Access Computech Pvt. Ltd.

Jun 2023 - Dec 2023

Gujarat, India

Technologies: C#, .NET, ASP.NET, VB.NET, MySQL, Oracle, SQL

- Reduced data-capture processing time by **40%** by delivering a customer-facing barcode management application end-to-end across **.NET backend services, the relational data layer, and a responsive frontend**, deployed to **3 live client** environments.
- Improved query performance by **20%** by optimizing **SQL** and **Oracle** stored procedures against a **5M+** record customer dataset, contributing to a **12% increase** in customer retention.
- Owned the **full project lifecycle independently** from requirements gathering through deployment and post-release support across all 3 client sites.

Technologies: React, TypeScript, Node.js, SASS, Postman, Bootstrap, Figma, Git

- Containerized application modules with **Docker** and authored **Kubernetes** deployment manifests, standardizing environment parity across development, staging, and production.
- Drove a **35% lift** in user engagement and a **20% reduction** in page load times by tuning REST API integration patterns, including **data fetching, caching, error handling, and loading states**.
- Validated and debugged RESTful API contracts using **Postman**, implementing data fetching, error handling, and loading states to ensure reliable client-server communication ahead of each release.

PROJECTS

Simple S3 Storage | [Code](#)

Technologies: TypeScript, Node.js, Express, AWS SDK v3 (S3), Prisma ORM, JWT, React 19, Vite

- Built a self-hostable managed storage platform on the **AWS S3** and **S3-compatible API**, implementing presigned-URL uploads so file transfer bypasses the application server and scales independently.
- Secured the backend with **JWT authentication** and **bcrypt password hashing**, exposing a documented Express REST API over a **Prisma-managed relational data layer**.
- Separated client and server into independently deployable services, supporting deployment to any cloud platform or self-hosted environment.

LoadBalancerX - Multi-Server Load Balancing System | [Code](#)

Technologies: C, TCP/IP socket programming, Debian Linux, multi-process concurrency

- Engineered a **multi-server load balancer** in C that distributes client requests across a primary server and two mirror servers, preventing overload and optimizing resource utilization.
- Implemented reliable client-server communication using **low-level TCP/IP socket programming**, handling connection lifecycle, request routing, and networking flows directly.
- Applied multi-process concurrency to serve simultaneous client connections, with recursive directory scanning and file attribute handling for resource retrieval

Personal Portfolio & Blog | [Live](#)

Technologies: Astro, React, TypeScript, Tailwind CSS v4, Preline UI, Sanity (Headless CMS), Playwright

- Built a production-ready portfolio and blog site with **Astro** and **React islands** in strict **TypeScript**, shipping a zero-JavaScript-by-default static architecture that hydrates React only where interactivity is needed.
- Integrated Sanity as a **headless CMS** with graceful fallback rendering, enabling content updates without touching code or redeploying, and styled an accessible UI with **Tailwind CSS v4** and **Preline UI components**.
- Established end-to-end test coverage with **Playwright** across core user flows and build to accelerate architecture decisions, debugging and test authoring; deployed live on Vercel.

Ecospace - Digital Marketplace for Eco-Friendly Products | [Code](#)

Technologies: Python, TypeScript, Docker, Flutter, MySQL, PostgreSQL, Figma

- Architected “Ecospace” as a full-stack e-commerce marketplace, connecting a Flutter mobile app and **TypeScript web client** to a **Python backend**, with **MySQL** and **PostgreSQL** managing a multi-vendor product catalog and order data.
- Built the core shopping flow - product discovery and search, cart, secure checkout, and order tracking, a design system, letting users browse and purchase eco-friendly products across mobile and web.

CERTIFICATIONS

[AWS Certified Solutions Architect - Associate](#)

EDUCATION

P.G. Diploma: Full Stack Software Development	Jan 2024 - Aug 2025
Lambton College (Ottawa), Ontario	GPA: 3.62/4.0
Bachelor of Engineering: Computer Engineering	Jul 2019 - Apr 2023
Gujarat Technological University, Gujarat, India	GPA: 3.5/4.0
